

## Let Your Kids Play

Do you often get discouraged trying to help your child understand concepts and skills he needs for school? Certainly tasks such as memorizing addition and multiplication facts, grammar and spelling rules, and the cities on the spice route can be less than fun. If you have ever thrown up your hands in despair over a fourth grader who still adds on his fingers rest assured: you are far from alone. Everyone could use a little back up, and that is where educational computer games come in. There are hundreds of free educational computer games online to help your child in any area. These games can be very beneficial in helping your child succeed in school, and they are certainly more fun than hours spent in a stand-off with a child who insists it is impossible to memorize the multiplication tables. Picking the right educational computer games can save everyone a lot of frustration.

What should you look for when choosing between the huge variety of educational computer games? The main goal for most parents is to see their children succeed, and instilling confidence is a good beginning. Educational computer games that motivate children while giving them the positive reinforcement they need will encourage your child to aim. Confidence is an important component in education.

Another component to look for in educational computer games is the level of difficulty. Your child should start playing at an appropriate level but always have room to advance. Good games have multiple increasing levels of difficulty. Mastering one concept should lead to the next, while keeping old skills in use.

Finally, the best educational computer games should be visually interesting. The world of the game should be one that entices your child without overwhelming him or her. If your child loves space, fantasy, the old west, knights and ladies fair, superheroes, rain forests, or even skateboarding you can look for games that educate while indulging a particular interest.

Learning shouldn't be an exercise in futility. Children who play educational computer games get into the game and sometimes forget they are even learning. The more fun a game is, the more they want to play and the more they will excel.
