

## Advantages and Disadvantages of VOIP

VOIP has become a force to be taken into account in the telecom sector with many individuals and businesses save time and resources by opting for a relatively low cost of voice over Internet protocol - VoIP. VOIP has many advantages and disadvantages.

### Advantages of VOIP

- The main advantage is the amount of money you end up saving on your telephone bill compared to a traditional telephone line.
- Inexpensive and easy to use. Because it is simple, the upgrade is relatively simple.
- You can integrate it with a phone connection.
- With VOIP PC to PC calls are free, no matter the distance and PC-to-phone charges are nominal.
- For a monthly fee, you can make unlimited free calls within a geographic area.
- A virtual number allows you to make calls from anywhere as long as a broadband connection is available.
- You can buy a number in a geographical area of your choice, which works very cheaply. If your friends and family live in Virginia, and moved to California, you can buy a number of Virginia and make local calls to your loved ones.
- You can access your account as your VOIP messaging from any Id anywhere in the world as long as you have an Internet phone. This makes it easy for those who travel frequently to make calls to those frequently return home at local call rates, no matter where they are.
- You can call or message, or to do both at the same time with VOIP services.
- VOIP costs about half the cost of traditional phone services, and it seems that taxes and surcharges are much lower. So your bill is easier to understand and it can be accessed via the Internet.

### Disadvantages of VOIP

- Loss of service during outages.
- Without power VOIP phones are useless, so in an emergency when power cuts, it may be a major disadvantage.
- With VOIP emergency calls, it is difficult to locate you and send help in time.
- A few times during the calls, there may be periods of silence when data is lost while it is clear.
- Latency and traffic.
- No standard protocol applies.

Disadvantages of VOIP could be boring, but their effects are relatively limited. Complaints of VOIP are generally tolerable if the appellants are using a free service. As technology progresses, we expect the quality of VoIP technology will be of traditional telephony.

These are some of the advantages and disadvantages of VOIP. All said and done, we can say that the benefits of VOIP outweigh the disadvantages thereof.
