

Laptop Docking Stands: From Laptop to Desktop

There are so many important accessories for a laptop, one of them is the docking station. Its purpose is from being an attachable docking stand to making a laptop function like a desktop. Still, the compact features of your laptop is always there. You can still bring it anywhere you go, the docking stand can be left behind so making your laptop compact and light.

Laptop stands are ergonomic, height adjustable, and designed for use with your external keyboard and mouse. This sleek and innovative laptop stand has numerous design offers for users. The four position height adjustability enables personalized and ergonomic comfort for users. The good looking curvature of the cooling cradle provides the functional benefit of increasing airflow of cooling ambient air, thus helping to increase battery longevity

Laptop batteries exude high heat output, and these system's life cycles can be severely shortened if they are not provided a means to keep cool. Sitting them flat on your desk essentially seals the heat in, as it offers little if any air flow circulation All you have to do is lower the laptop docking stand to its lowest (flat) position, push the slide switch on the front cooling cradle to the right, ease the cradle towards you. When you're done, just reset the retainer.

The Oyster can be used with either Mac or PC laptops and its design brings the laptop screen to the right height for better posture at the same time as eliminating the need for another monitor (or enabling it to sit alongside the second monitor instead of below it). Other advantages include a smaller desk "footprint", internal cable concealment, storage, and an in-built 4 port USB hub.

About the Author
