

## What Is Bluetooth, A Description Of Bluetooth Technology

Every day we are seeing more and more electronic gadgets that are advertised as being Bluetooth enabled. This may leave you feeling excited or it may leave you trying to figure out what all of the fuss is about. You may just want to know what is Bluetooth? You may just want a simple description of Bluetooth technology. Bluetooth mobile wireless technology is fast becoming a leader when it comes to technologies that involve wireless communication. It is becoming all the rage all over the world because in the short time it has been around Bluetooth technology has paved the way for computers, telephones and other electronic gadgets to be able to communicate with other Bluetooth devices that are within range. The current range for Bluetooth wireless technology networking is about thirty feet. The Bluetooth wireless system provides a cheap and secure way to communicate with other Bluetooth devices. This is done without the need for any wires. You may be wondering what is Bluetooth good for. Bluetooth technology is now used in almost all of the newer cell phones and handheld PDAs. Some laptops and printers use this as well. This is just a small sampling of the type of devices you can purchase that uses this technology. Every day more and more products are being brought to market. Wireless phones are probably the most widely Bluetooth enabled device, but new things are coming out every day. You can now find Bluetooth wireless speakers and headphones. The future should see many new Bluetooth gadgets come into the marketplace. It is possible that some day wireless will really mean just that. The only wire you will see is the one that plugs into the wall socket. People will look forward to the day when that tangled mess of wires is a thing of the past. Some of the big advantages of Bluetooth technology are how fast the transfer of data is and how inexpensive the components really are. You also are able to transmit both data and voice at the same time. Bluetooth technology has been around for a few years now. It is becoming more and more popular because it is used by many different manufactures, and the price is reasonable. You can expect to see a lot more Bluetooth enabled devices come out and hopefully the prices will become more reasonable as time goes by. It will not be long before it will be hard to find someone who will ask the question what is Bluetooth. Soon a description of Bluetooth technology will not be needed.
